EMPLOYEE TRANSPORTATION SOLUTION WITH A PHARMACEUTICAL COMPANY IN ASIA

Overdrive IoT deploys its award-winning employee transportation solution to help one of the global leaders in patient-focused medical innovations for structural heart disease, to manage their employees' commute to and from work and ensure their safety, always.

The Challenge

Offering bus transportation services for employees is a peak for many but issues on safety became a primary concern as companies lack the platform to track and manage who is on board.

Administrators have to manually keep track of their employees and when an incident occurs, records show inaccuracies on the list of passengers on board.
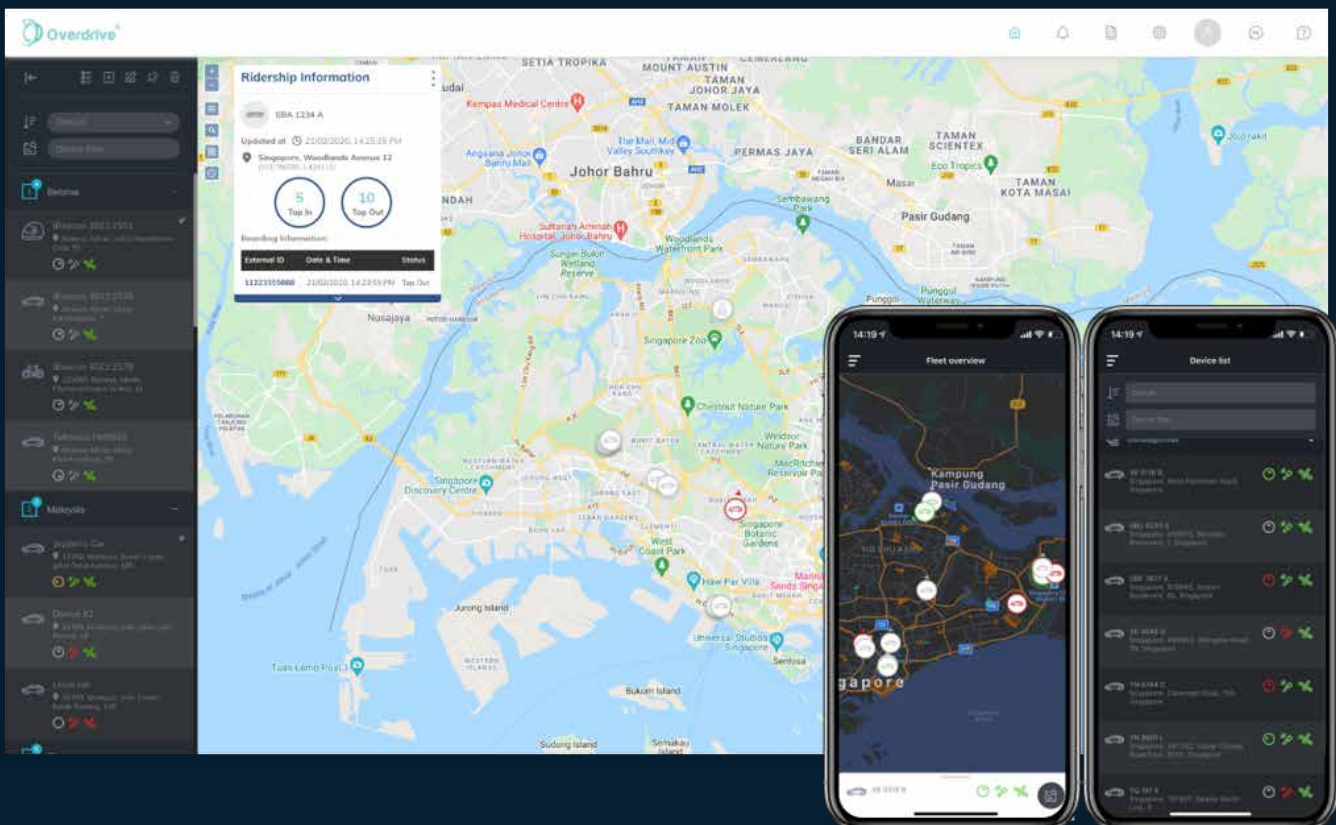

The Solution

To overcome issues concerning passenger safety, Overdrive developed a transport monitoring platform designed to help companies ease the commute of their employees and provide a better way to account for their staff. The solution provides complete visibility to their employees and empowers them with an accurate manifest of people onboard.
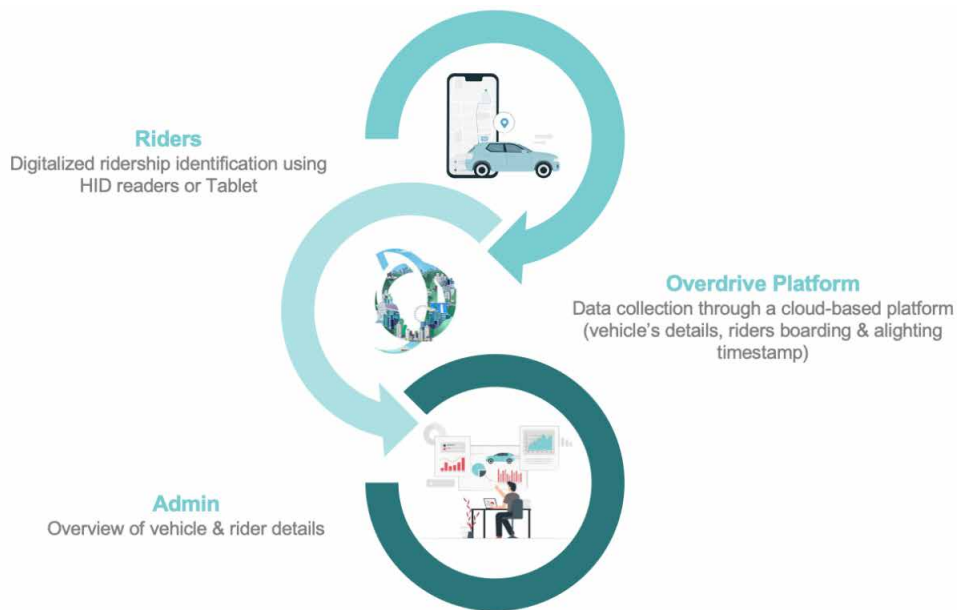

The platform also enables fleet management capabilities that can prevent future accidents from happening. It consists of reports and dashboards that give detailed insights into the bus utilization, trip information, drivers behavior and geofence assignments to help capture every aspect of both their employees and drivers' commute.

Number of Assets:

3,000 Passengers & 100 Buses

How does it work?

Riders
Digitalized ridership identification using HID readers or Tablet

Overdrive Platform
Data collection through a cloud-based platform (vehicle's details, riders boarding & alighting timestamp)

Admin
Overview of vehicle & rider details

The Benefits

Enhance overall safety with accurate manifest of passenger onboard

Eliminate transport abuse by identifying unauthorized passengers

Improve productivity by auto plan routes and anticipate schedules

Promote a **work-life balance** environment

The Results

Companies gain greater visibility on the employees taking their transport, and have a better platform to account for their staff. Our solution eliminates discrepancies on passenger count and identifies any unauthorized passengers to take the company transport, thus reducing the abuse made in company transport. Moreover, it gives drivers the protection they need by monitoring risky driving behaviors such as speeding, harsh braking, idling and more.

As data is readily available, pharmaceutical industries are now informed on ridership and usage trends which greatly helps to lighten the administrative workload on management, as well as streamlining operational processes and reducing overall operating costs.

Who Are We

Overdrive is the leading real-time asset monitoring IOT company in Asia that provides end-to-end IoT solutions and automates data sensing of various types of assets within a business ecosystem, from vehicles and machinery to facilities and people – all under one roof.

What We Do

Specialises in

- Vehicles Monitoring
- Airport Management
- Vessel Tracking
- Heavy Machinery Monitoring
- Smart Hygiene
- Environmental Monitoring
- Sustainability Solution
